
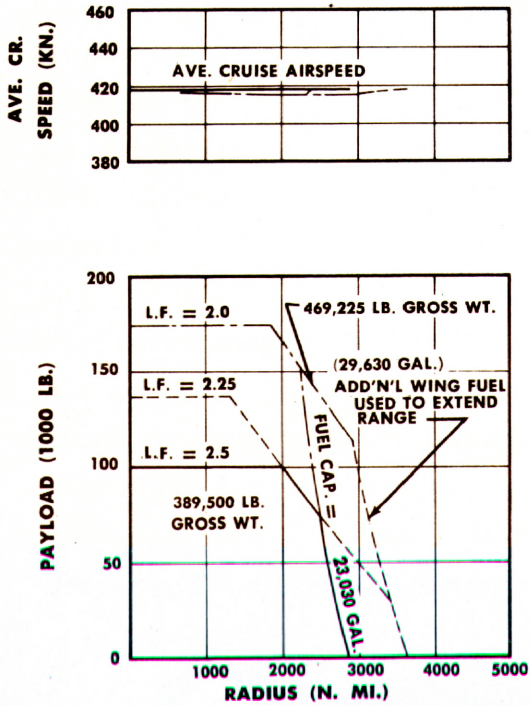
PAYLOAD VS RANGE — CARGO VERSION



PAYLOAD VS RADIUS — CARGO VERSION

The XC-132 was designed to carry 100,000 lbs. of cargo for a distance of 3,500 nautical miles.

The payload-range and payload-radius capabilities of the XC-132 are shown in these figures. All cruise is with normal rated power at best long range altitude. The design fuel capacity as well as the maximum capacity of the wing are shown. Mil-C-5011A assumptions were used for all range and radius calculations.
